

# SC-CCC

## CONTINUOUS COIL CLEANER

**SC-CCC** is a blend of polyacrylate scale inhibitors that retards crystal growth of scale in any piece of equipment where scaling is a problem. **SC-CCC** is highly effective in industrial water treatment and oil production applications where they inhibit the deposition of calcium carbonate, calcium sulfate, and barium sulfate and other low-solubility salts on surfaces. This polymer shows good activity over a wide range of pH, water hardness, and temperature conditions. **SC-CCC** does not contain phosphorous, making their use acceptable where legislation requires that discharge water contains low or no phosphorous.

### SPECIFICATIONS

Physical Appearance.....	Clear , liquid
Odor.....	Slight acrylic odor
Specific Gravity.....	1.110 gms/ml
ph.....	3.0-4.0(concentrate)
Viscosity.....	10 centistoke
Freeze point.....	-10 C
Phosphorous as % P.....	None
Flash point.....	None

### DIRECTIONS

Dosages are to be determined by the water consumption. Generally SC-CCC should be dosed at 25-100 ppm(1 to 4 milliliters per 10 gallons of water).

### CAUTION

May cause eye irritation in concentrated form. Wear safety glasses when handling product. **KEEP OUT OF REACH OF CHILDREN.**
